Brüel & Kjaer provides transducers and complete systems for the measurement and analysis of sound and vibration in a wide range of applications:

- Noise
- Vibration
- Sound Quality
- Modal Analysis
- Quality Control

Brüel & Kjaer has been solving sound and vibration problems for more than 50 years. They are a worldwide supplier of dynamic sound and vibration measurement and analysis solutions, servicing customers involved in research, product development, manufacturing and compliance testing. Applications serve all major industries with special focus on automotive, aerospace, industrial machinery and consumer goods. Users are also found among governmental institutions like environmental authorities, universities and the defense.

Amongst a selection of over 200 main products in their program and a complete set of accessories, you'll find Brüel & Kjaer acoustic and vibration transducers, analyzers, software and systems to meet your measurement need.

Brüel & Kjaer's main products include:

- **PULSE**, a versatile, task-oriented analysis system providing the platform for a range of PC-based noise and vibration measurement solutions
- **AMBIT**, a new multichannel system that consists of an intelligent Data Acquisition System (IDA) front-end, acoustic application software from Brüel & Kjaer, and I-DEAS Master Series software products from SDRC.
- **OrthoShear**, a new Compact Uni-mass Triaxial Accelerometer for modal analysis.

Brüel & Kjaer provide these products as well as a large selection of hand-held sound level meters, microphones, accelerometers and more.

Brüel & Kjaer is represented worldwide in the form of fully integrated sales and service companies in more than 63 countries around the globe. In this way Brüel & Kjaer's knowledge and experience is made available to customers all over the world. Their European office is located at the following address:

Skodsborgvej 307
